DESCRIPTORS: *Wood pulp, *Viscose, *Fibers,
Molecular structure, Reaction kinetics, *Cellulose,
Chemical reactions, Phase studies.

Some investigations on the reactivity of chemical pulps
are reported which aimed first at the solution of the
problem concerning the relationship between super-
molecular fiber structure, reaction kinetics and
processability during the viscose process, and second,
to give some suggestions and indications for the
laboratory tests of the processability in the producing
or converting industry. (Author)

no. 8, p. 305-309.

Tests, made with the aim of replacing potassium per-
manganate for bleaching parchmentising acid by an-
other bleaching medium, showed that neither hydrogen
peroxide, potassium perchlorate or electro-chemical
bleaching give the desired result. Sodium chlorate
however provided the solution.
